Haematology - Point of Care

The new Diatron Aquila is an innovative instrument that can be used in any testing scenario including satellite laboratories, physician offices and clinics. It is a revolutionary 3-part differential haematology analyser for any testing location and application where high quality CBC results are required.

- Compact size
- On board reagent pack
- no external waste connection required
- 22 haematology parameters
- 3 separate histograms
- storage of 10 000 results
- portable system
- optional battery pack for mobile testing
