IN NUMBERS

'Ill-prepared' for major incident

Researchers at Oxford University conducted a phone survey to see how prepared health professionals were for major incidents.

Specialists completed the survey

knew where to find a copy of their **incident plan**

did not know where to locate it, and the rest were unsure.

When asked what role they would have in a major incident response, 36% knew what they would be required to do, 37% were not sure and 27% did not know.

A woman with Britain's rarest blood type

is its only NHS donor.

Sue Olds has the rare **blood-type -D-**. There are only 110 people in the world with the blood type - and 88 of those live in Japan. Sue, 52. has made 46 donations to date and plans to carry on donating three times a year.

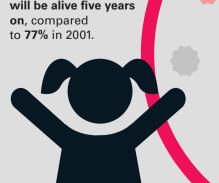

by the NHS could be worth nearly £10bn

a year, claimed **Ernst & Young.**

A report said the value of the NHS data set could be £5bn per annum. It also said the data could be used to deliver £4.6bn of benefit to patients though personalised medicine and big data initiatives, as well as operational savings and improved outcomes.

Survivals rates for children with cancer have risen 9% since 2001, the ONS has revealed.

An estimated 86% of children aged up to 14 diagnosed with cancer in England in 2018 will be alive five years **on**, compared to **77%** in 2001.

3 deaths in nine months

A 43-vear-old Israeli flight attendant has died from measles.

It is the third death from measles in Israel since November, after no measles deaths for 15 years.
